

TEST DENO

1) Test con Denon y Thunder: el método POST permite la carga del color ingresado en el array de colores.

The screenshot shows the Thunder Client interface with a POST request to `http://localhost:8080/`. The request body is a JSON object: `{ "color": "yellow" }`. The response status is `200 OK` with a size of `13 Bytes` and a time of `4 ms`. The response body is `1 Color Cargado`.

Below the Thunder Client interface, a terminal window shows the command `denon run --allow-net app.ts` being executed. The output shows the application listening on `http://localhost:8080/` and displaying the color `green` and the array `Array de colores: green`. The user then enters `yellow` and the application displays `Array de colores: green,red,blue,yellow`.

2) Vista del Formulario:

The screenshot shows a web browser window with the address `localhost:8080`. The page title is `Ingresa Color`. There is a text input field and a button labeled `Agregar Color`.
